A SUMMER INTERNSHIP CASE STUDY

Juniors Can. Here's the Code.

Four students. Four weeks.
One working application.

ITWORX SUMMER INTERNSHIP

2026

ASP.NET Core + React

Built by four student interns

Technical mentor: Hany Gheit

The highlights from the new whitepaper

SWIPE →

THE STARTING POINT

New stack. Clear target.

Four computer science undergraduates. Different universities and stages of study.

Most began with:

C#

Basic knowledge

React

Limited practical experience

THE PROJECT

Build WorxForge

ASP.NET Core API + React frontend

THE INTERNSHIP PLAN

Four weeks. A deliberate path.

1

Learn concepts

Understand the system and its data flow.

2

Define requirements

Use AI to clarify scope and plan the work.

3

Build with agents

Main implementation phase: one week.

AI-assisted implementation

4

Deploy, test, demonstrate

Present the locally deployed application.

Reported phases from the mentor’s account.

THE OWNERSHIP

Agents wrote code. Students owned delivery.

They directed the agents, tested results, and iterated toward the agreed behavior.

01
Direct

02
Test

03
Iterate

Technical mentorship

Learning strategy. Project scope. Decisions.

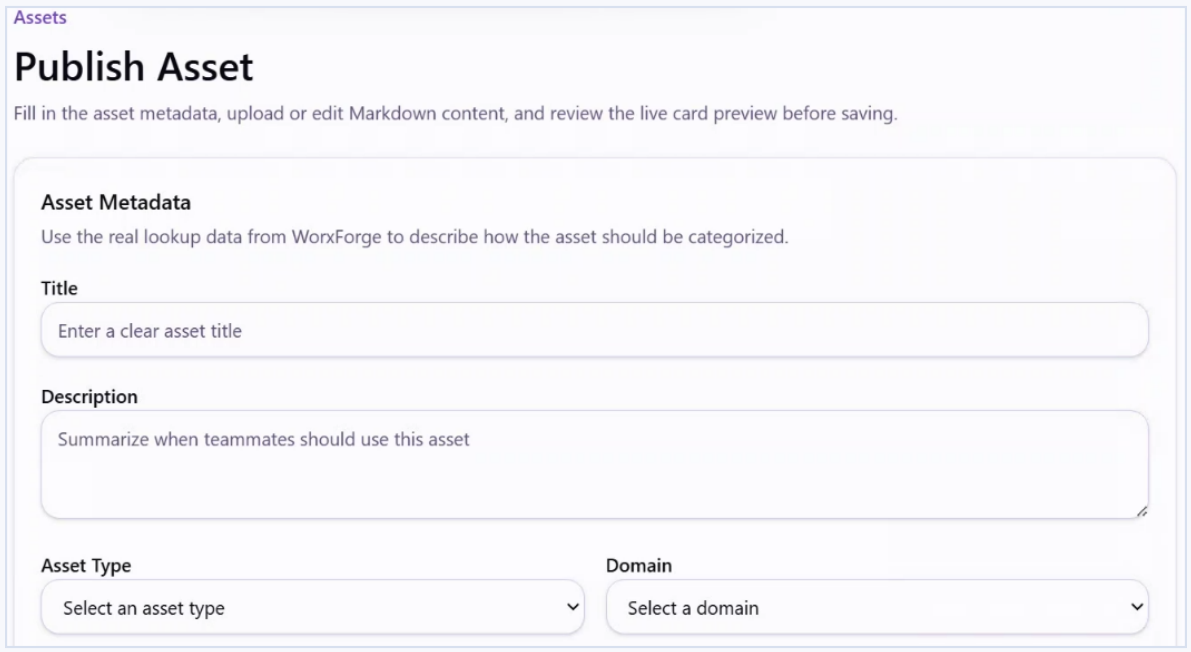

For the first delivery, the mentor wrote no code, made no commits, and did not inspect the source.

Historical implementation, as described in the whitepaper.

THE RESULT

A working application. On demo day.

WorxForge helps people publish, discover, and reuse knowledge assets.

- **Discover**
- **Publish**
- **Save**
- **Follow activity**

The agreed workflows behaved as expected in the local demonstration.

Historical demo view; cropped and permanently redacted.

THE LESSONS

Learn concepts. Build judgment.

Less time memorizing syntax.
More time understanding the system.

A RETROSPECTIVE ESTIMATE

About 2+ months

Comparable learning with code written manually.
Mentor estimate; no measured speed comparison.

OWNERSHIP

Learners guide implementation, test, and iterate.

AN HONEST OBSERVATION

The mentor observed heavy first-time token use and considered it acceptable for these learners.
Qualitative observation; no usage or cost totals.

THE TAKEAWAY

Juniors have a place here.

One cohort. One local demonstration.
A concrete case worth learning from.

Outcomes are mentor-reported. The case does not measure general productivity or establish production readiness.
